

Opportunity Match Report

Candidate: Ojaswi Bhardwaj

1 Executive Summary

Candidate Ojaswi Bhardwaj is a high-signal engineer with a rare combination of AI orchestration, distributed systems knowledge, and modern full-stack proficiency. Unlike standard entry-level applicants, the candidate demonstrates a deep understanding of asynchronous processing, secure signature verification, and microservices communication.

2 Top Job Matches & Justifications

2.1 AI Full-Stack Engineer (Early Stage Startup)

Match Score: 10/10

Ojaswi is perfectly aligned with the current AI agent wave. Having built MandateGuard (LLM-to-JSON pipeline) and Dispatch (Claude-powered incident classification), they possess the exact stack required: Next.js, FastAPI, and LLM API integration. They can not only build the UI but also engineer the prompt-to-structured-data pipelines essential for AI agents.

2.2 Product Engineer - AI Focus

Match Score: 10/10

The ability to ship end-to-end products is evident in DriftSeek and ConnectUs. With a mastery of TypeScript, Next.js, and Supabase, Ojaswi can rapidly prototype and iterate on AI features. Their experience with WebSockets and real-time updates is a critical asset for building responsive AI chat interfaces.

2.3 Full-Stack Developer (FinTech/Payments)

Match Score: 9/10

The implementation of Ed25519 signatures in MandateGuard proves a level of security consciousness rarely seen at the junior level. This, combined with experience in PostgreSQL and API design, makes them a prime candidate for secure financial systems where data integrity and immutable evidence are non-negotiable.

2.4 Backend Engineer - Distributed Systems (Growth Stage)

Match Score: 9/10

The architectural decision to decouple health checks into a gRPC service in DriftSeek is a massive technical win. Their proficiency with Redis for caching and Celery for async task processing indicates they can handle the scaling challenges of a growth-stage company moving away from monolithic architectures.

2.5 Software Engineer I (Cloud/DevOps Focus)

Match Score: 8/10

Beyond coding, Ojaswi has a solid foundation in infrastructure. With Oracle Cloud certifications, AWS EC2 deployment experience, and a disciplined approach to CI/CD via GitHub Actions, they can manage the full lifecycle of their code from commit to production.

3 Technical Skill Matrix

Category	Key Proficiencies	Competitive Advantage
Frontend	Next.js, React, TypeScript, Flutter	High-fidelity animations & cross-platform capability
Backend	FastAPI, Node.js, Django, gRPC	Expert in async patterns and high-perf communication
AI/LLM	Claude, Groq, Ollama, JSON Schema	Proven ability to build autonomous AI pipelines
Infrastructure	Docker, AWS, GCP, GitHub Actions	Cloud certified with actual deployment experience
Database	PostgreSQL, MongoDB, Redis, Supabase	Versatile across SQL, NoSQL, and Caching layers

4 Final Recommendation

Stop targeting generic Junior Developer roles. Ojaswi is overqualified for standard CRUD applications. Target Y Combinator startups and Series A/B firms that require a Product Engineer who can handle both the AI orchestration and the underlying distributed system architecture.
