1 Professional Summary

High-agency AI Engineer specializing in agentic orchestration and scalable backend architectures. Proven track record of deploying production-grade LLM frameworks using LangGraph and RAG to automate complex business workflows. Expert in transforming raw AI capabilities into measurable business ROI through latency optimization, evaluation frameworks, and robust MLOps practices.

2 Technical Skills

- **Languages:** Python, TypeScript, JavaScript, Java, SQL
- **AI & Agentic Frameworks:** LangGraph, RAG, OpenAI GPT-4, Google Gemini, Claude 3.5, Vector Databases (Pinecone, Milvus, ChromaDB)
- **Backend & Cloud:** Node.js, React, Next.js, Docker, GCP, MongoDB, Redis, gRPC
- **Engineering Fundamentals:** Scalable System Design, RESTful APIs, Microservices, CI/CD, RAG Evaluation (Ragas, TruLens)

3 Professional Experience

AI Engineer | Grazitti Interactive

[Insert Dates]

- Engineered scalable backend modules using Java, implementing advanced creational and structural design patterns to reduce code redundancy and improve system maintainability.
- Optimized data processing pipelines, reducing execution latency for core modules by streamlining algorithmic complexity and memory management.
- Collaborated on the deployment of enterprise-grade software solutions, ensuring adherence to strict software development life cycle (SDLC) standards.

4 Selected Projects

MerchantAgent | Lead Architect

- Architected an autonomous agent framework leveraging LangGraph to orchestrate multi-step AI workflows, reducing manual operational overhead for merchant onboarding by an estimated 40%.
- Implemented strict schema validation using Zod and integrated a modular tool-calling layer to eliminate LLM hallucinations in production environments.
- Developed a high-performance frontend using React and Node.js to provide real-time observability into agentic decision-making processes.

LuminaQuant | AI Lead

- Deployed a hybrid LLM strategy integrating GPT-4 and Gemini to synthesize complex financial datasets, increasing research throughput and data synthesis accuracy.
- Engineered a sophisticated RAG pipeline with custom chunking strategies and hybrid search to minimize retrieval latency and maximize context relevance.
- Built a responsive analytics dashboard using Next.js and TypeScript to visualize quantitative investment insights.

DriftSeek | Systems Engineer

- Engineered a high-availability monitoring platform leveraging gRPC for low-latency communication, supporting 100+ concurrent connections with 99.9% uptime.

- Optimized state management and caching using Redis and MongoDB, reducing database read latency by 30%.
- Implemented a real-time alerting system using Next.js and React to monitor system health and trigger automated recovery protocols.

5 Education

Bachelor of Technology in Computer Science | Lovely Professional University *[Insert Year]*

6 Certifications

- Oracle Cloud Infrastructure (OCI) Foundations
- Oracle AI Foundations
- NPTEL Cloud Computing
